Epoxy/Epoxy/Standard Urethane

Epoxy/Epoxy/Standard Urethane/Clear Coat Urethane

Peacofour System

Peacosil 100/Peacopour RC Finish/ Peacofour 6700

A System Beyond Compare

There is just no comparing even the best urethane to Peacofour System, Peacofour 6700. As Shown, other systems not only lose gloss quickly, but with the use of clear coat finishes, aging may bring on yellowing of the color. If color and gloss retention are important, the clear choice is Peacofour System.

Excellent Color and Gloss Protection

Up until the last decade or so, 25+ year color and gloss retention was limited to those who could use PVDF finishes as applied and baked on industrial coil coated material. Peacock Paint is now pleased to offer these finishes in an air dry formula. Peacofour 6700 far outperforms the current standard for water tank exteriors as well as the clear coat finishes. This product meets the performance criteria as established under AAMA 605.2

Anti-corrosive Protection

When properly applied and maintained, there should never be a need to remove a zinc rich primer on a water tank. Based upon a 100 year life span, and proper overcoats with Peacofour 6700, the tank's old coatings should never have to be removed (Other high-performance primers are also available for use with Peacofour 6700.)
